LIST OF JOURNALS

The periodicals and serials listed below are all scanned for material of value for reviewing in the Science Abstracts Publications (comprising Physics Abstracts, Electrical & Electronics Abstracts, Computer & Control Abstracts, Current Papers in Physics, Current Papers in Electrical & Electronics Engineering and Current Papers on Computers & Control). The list includes those periodicals from which all articles in each issue are invariably abstracted, but they are also listed separately at the end ('Journals abstracted completely').

Some of the abstracts are reproduced, with permission, from other abstracting periodicals, and in these cases the name of the

abstracting organisation may be given in place of the address of the original journal, where it has not been possible to determine the latter. Further inquiry should be made from the abstracting organisation named, addresses are given at the end of the list ('Abstracting journals and reports').

Abstracts are published only of articles which are believed to be in general circulation, and which should therefore be available in national and scientific libraries, or from the publishers, whose addresses are given in this list. Application should not be made to 'Science Abstracts' for copies of the full text of any of the articles abstracted, or for translations.

JOURNALS ABSTRACTED COMPLETELY

Selection of articles from any journal included in the list of Journals depends on the subject of the articles and their quality.

A number of these journals however are central to the INSPEC subject field and of a quality such that, virtually without exception, all articles are regularly abstracted. These journals are listed below.

The use of l', n' and t' in Russian and Bulgarian (where they are not transliterations of a single letter, but merely l, n or t followed by the soft sign) is included to emphasise the fact that they are used for single letters only in Serbian.

'Shch' and 'sht' invariably represent the letter Щ in Russian and Bulgarian, respectively, since the pairs of letters (Щч in Russian and ШТ in Bulgarian) seem never to occur consecutively in the respective languages.

The above table is reproduced, by permission, from the pamphlet 'The transliteration of Russian, Serbian and Bulgarian for bibliographical purposes' published by the Royal Society, Burlington House, London W1 (February 1953, price 1s.). It represents the system at present in use in Science Abstracts for the transliteration of the names of journals and the names of authors of articles abstracted.

The former treats (1) Definition of contemporaneousness (Gleichzeitigkeit), (2) The relativity of lengths and times, (3) Theory of space- and time-transformations from resting to uniformly translated systems, (4) Physical significance of the equations obtained for moving rigid bodies, &c., (5) Addition theorem for velocities. ...you probably missed this Science Abstract

Einstein's paper on the special theory of relativity, published in September 1905, is only one of the many vital papers which have appeared in Science Abstracts since they began publication in 1898. You can forgive yourself for missing that one, but are you sure there are no other knowledge gaps in your literature searches?

If there are, back issues of Science Abstracts will fill those gaps.

Abstracts journals, containing titles, authors, abstracts, together with information necessary to locate the source of the original document, are produced in three separate publications: Physics, Electrical & Electronics and Computer & Control Abstracts. They are also published in concurrent microfiche form.

Back issues of Science Abstracts can do for you what the apple did for Newton!

FACTS

Physics, Electrotechnology, Computers & Control

From the world's technical literature, INSPEC will bring you 150,000 facts this year in the fields of Physics, Electrotechnology, Computers & Control.

These facts will be selected and processed from a wide range of periodicals, conference proceedings, books and reports in all languages, for input to the INSPEC data base, from which all the INSPEC services are derived.

These services include Abstracts Journals, Current Papers, SDI (Selective Dissemination of Information), Topics (SDI service based on standard profiles), and Magnetic Tape Services.

INSPEC is also an agent for many other information services including the Information Service on Nuclear Science and Technology (AERE, Harwell), Metron (Sira Institute), Current Physics Information (American Institute of Physics), and Smithsonian Scientific Information Exchange (Smithsonian Institution).

ABSTRACTS AND CURRENT PAPERS JOURNALS

Three main subject areas are covered by INSPEC abstracts and current papers journals: physics, electrical and electronics engineering, and computer and control engineering. For each field an abstracts journal and a companion titles journal are published. The abstracts journals are intended as library tools for retrospective information retrieval, whereas the companion titles journals, which omit the abstracts and associated indexes, are intended as low-cost current-awareness tools for the individual.

CUMULATIVE INDEXES

Cumulative indexes are available for *Physics Abstracts*, *Electrical & Electronics Abstracts*, and *Computer & Control Abstracts*, for both authors and subjects. These cumulations generally cover a period of four years, with the exception of *Computer & Control Abstracts* where the initial volume covered the period 1966-68. The table below shows the prices and periods for the two types of cumulative index.

OTHER INSPEC SERVICES

SDI

(Selective Dissemination of Information.) This is a service individually tailored to the requirements and interests of the engineer or research worker. Details of information relevant to the interest profile of the individual subscriber are selected from the data being processed for the INSPEC database. Information is dispatched weekly on 150 mm x 100 mm (6" x 4") cards.

TOPICS

This is an SDI service based on standard profiles. There are 48 subjects covering high-activity areas of research and development. This is an inexpensive card service designed to alert engineers and researchers to the availability of literature within their subject area.

MAGNETIC TAPES

These are produced, containing all the information included in the INSPEC publications. They enable the larger research and development organisations to produce their own internal information and current-awareness services.

For more details of any of these services please write to:

INSPEC Current Papers keep you up-to-date with what is happening **now** in Physics, Electrotechnology, Computers & Control.

The service is designed for laboratories and development organisations where individual research workers require up-to-date information.

Published as **Current Papers in Physics**, twice-monthly, **Current Papers in Electrical & Electronics Engineering**, monthly, and **Current Papers on Computers & Control**, monthly, INSPEC current papers journals provide the title, authors and bibliographic reference for

every entry published in the companion INSPEC abstracts journal, using the same classification scheme.
